 - VGA: Min. 1024x768, True color
- Monitor Type: CRT or LCD monitor
- 3 USB ports min., CD ROM Drive
- Internet connection with active email account (optional)

Getting started

Important: updating your software

The O3T turntable must be used with the PackshotCreator 360 software. If the software version you are currently using does not have a "3D" button in the upper right corner of the user interface, you must upgrade your software before continuing.

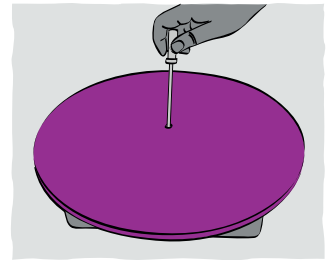

Hardware installation

Step A

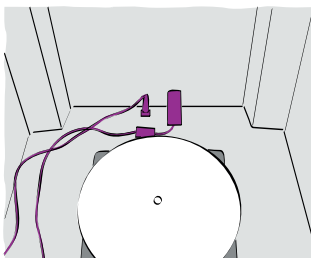

Choose the rotation platform that best fits your needs. The package includes a 39 cm rotation platform covering the 29 cm platform.

- To use the 29 cm rotation platform, simply remove the screw in the center of the 39 cm platform. Do not lose the screw.
- To put the 39 cm rotation platform back, line up the two rotation platforms with the help of the 4 alignment marks and replace the screw in the center.

Step B

Place the O3T turntable inside of the PackshotCreator lightbox. Select a background: two black and two white backgrounds are included in the O3T package. However any background color, texture and size can be used.

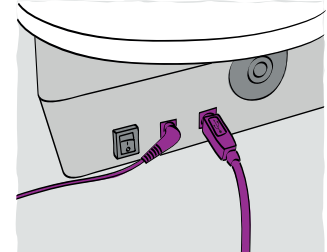

Step D

Connect the USB cable to the turntable.

- For Mini models: plug the other end of the USB cable directly into the USB port of your computer.
- For Business models: the lightbox has an integrated USB port. Connect the USB cable to this port then complete the installation by running a USB cord from the back of the lightbox to your computer.

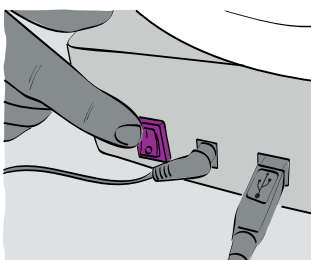

Step C

Plug the power cord into the turntable. Plug the other end of the power cord into a power jack.

Step E

Once you have installed the turntable in the lightbox, use the side shot background to cover the cords.

Step F

To start working with the O3T turntable, flip the switch button located on the turntable to the 'on' position.

Troubleshooting

If the message “USB Connection Error” appears:

- Check that the turntable is powered.
- Make sure all USB cords are properly connected and that the O3T turntable is properly connected to the PC.
- Check that the power switch on the turntable is set on the ‘on’ position.
- Close all windows then re-launch the software and try again.

If the problem persists, try to remove any other device connected via USB or plug the O3T turntable into a different port of your computer and try again.
